

Urban Steam – App Review

Review Date: 1 October 2026

1. Opening Screen & Logo

1. Opening motion graphic

The opening motion graphic is not completing properly. It stops at the static logo. The complete motion graphic should play correctly before entering the app.

2. Old logo showing on some devices

On some devices, the old logo is still showing instead of the new motion graphic/logo. Please check the app build/cache and make sure the new branding is showing on all devices. Picture reference attached.

2. OTP & Login

3. Increase OTP timer

Increase the OTP timer to 60 seconds.

4. OTP showing as expired

The app is showing “OTP expired” even when the OTP is entered within the allowed time. Tested on 4 different devices. It is working correctly on only 1 device. Please investigate and fix this across devices.

5. OTP delivery delay

OTPs are sometimes arriving late. Please check whether this is a network/OTP provider issue or something related to the app. OTP delivery should be reliable and timely.

3. Voucher & Checkout

6. Apply voucher directly

The customer should be able to apply the voucher directly at checkout instead of copying and pasting the code. The note regarding the voucher will be changed because it is a one-time-use voucher.

7. Grand Total

At the final checkout step show: Grand Total → Discount/Voucher → Amount paid from Urban Steam Wallet → Final Amount to Pay.

8. Before Your Pickup screen

The “Before Your Pickup” screen should come before payment, not after payment.

9. Screen options not fully visible

Some options/content are not completely visible. Please check different screen sizes and make sure all text, buttons and options are fully visible.

4. Address & Pincode

10. Pincode issue

Pincode 560032 is saved/supported, but while adding an address the app shows “Coming soon to your area.” This does not happen during sign-up. Please fix the pincode validation. Picture reference attached.

11. Google Maps integration

Google Maps is not showing the exact customer location to the Captain. It is still showing “Partial matches.” Proper Google Maps integration is required.

12. Customer location pin

Once Google Maps is integrated, the customer should have an option such as “Use my current location”, “Pin my location”, or manually select the exact location on the map. The selected location should be passed correctly to the Captain.

13. Captain navigation

The Captain should be able to see the exact customer location and navigate directly to it. Please confirm that the selected map location/coordinates are passed directly to the Captain.

5. Cart

14. Cart total bar not visible

The total bar is not visible properly, even after reducing the phone's display size. Please ensure it is clearly visible on different screen sizes.

15. Cart should be saved

If the customer closes the app or moves to another app, the cart gets cleared. The cart should remain saved until the customer completes, edits or clears the order.

16. Delete entire cart confirmation

When the customer clicks the main/delete entire cart button, show: "Are you sure you want to delete the entire cart?"
Options: Yes / No.

17. Cart visible to Captain after "Reached Location"

The Captain should still see the complete cart/order details after pressing "Reached Location", including during the camera/photo-upload process.

6. Pickup Dates & Time Slots

18. Show actual dates

Instead of only "Pickup Today" / "Pickup Tomorrow", show the actual date.

19. Standard Delivery – minimum 4 days

Show a minimum of 4 days/dates as pickup options. Under each date, show the available time slots.

20. Express Delivery – separate slots

Express delivery should have its own pickup time slots, separate from Standard Delivery. Show 4 days/dates for Express as well, with the relevant slots underneath.

21. Past slots should automatically disable

Example: At 1:30 PM the app was still showing "Next available slot – Today 9 AM." Once a slot's time has passed, it should be greyed out/disabled and not selectable.

22. Express booking after the current time

Need to define the flow when a customer books Express after the day has progressed. Example: booking at 3 PM today. Decide available Express slots, Captain shifts, separate Express shifts, same-day cutoff time, and next-slot behaviour.

7. Garment Catalogue

23. Increase garment image size

Increase garment pictures slightly in the catalogue, closer to the WhatsApp catalogue experience.

24. Click image to understand the garment

Customer should be able to tap the garment image to zoom in and/or clearly see the garment name/type.

8. Garment Care

25. Garment Care Note

Show only during the first order, or provide a "DON'T SHOW AGAIN" option. If neither is possible, remove it.

9. Order Confirmation & Status

26. Order confirmation screen positioning

After booking is confirmed, the screen starts from the bottom. It should open from the correct/default position.

27. Remove Expected Delivery Time

Remove Expected Delivery Time from the Order Confirmed page and anywhere else it is displayed.

28. Cancel Booking after delivery

Once an order is delivered, "Cancel Booking" should no longer work. Currently it still works and the customer can be charged. Disable cancellation once the order is delivered/completed.

10. Captain App

29. Captain Order Summary

Make the Captain's order summary similar to the attached/reference WhatsApp cart format, with garment names, quantities and order details easy to understand.

30. Cart visibility during pickup

Captain should have the complete cart/order details throughout the pickup process, including after pressing "Reached Location."

11. Notifications

31. Notifications appearing incorrectly

Notifications are suddenly appearing together, and some appear to be from a different customer/account. Example: Wallet balance notifications showing incorrect account information. This needs investigation as a possible account/data mapping issue. Picture reference attached.

12. Wallet Plans

32. Rename "Subscriptions"

Change "Subscriptions" to "Wallet Plans." The customer is purchasing a Wallet Plan and receiving value into the Urban Steam Wallet; it is not intended as a recurring subscription.

33. Home Screen – Plan layout

Increase the size of Wallet Plan cards/layout on the Home Screen so all information is readable.

34. View All Plans

Add a "View All Plans" button below the Wallet Plans. It should always remain available, even after a customer purchases one plan.

13. Remove Points System Completely

35. Remove Points completely

Remove the Points System completely. It is confusing and not being used. We do not want to complicate the customer experience.

36. Remove Referral Points

Remove Referral Points from the sign-up page.

37. Remove all Points functionality

Remove Points balance, Redeem Points, Points transactions, Points notifications, and all Points references.

38. Wallet should be the only value system

Customer purchases a Wallet Plan and the value is credited directly to the Urban Steam Wallet. There is no separate Points system.

14. Critical Wallet Issues

39. Essential Plan – Wallet balance disappeared

Bought the Essential Plan for ■1,000. ■1,150 was initially credited to the Urban Steam Wallet. A Redeem Points option showed around 20 points. After clicking Redeem, the entire ■1,150 disappeared and the app showed "Infinite Balance." Screenshot reference attached.

40. Essential Plan – Second purchase

Purchased the Essential Plan again. This time, the wallet value was not credited at all.

41. Wallet/account isolation

Wallet Plans, credits, debits and transactions must always be linked to the correct customer account. No customer's wallet or transaction should affect another customer's account.

15. Sign-up

42. Terms & Conditions checkbox

What happened to the "I agree to the Terms & Conditions" checkbox during sign-up? Please add/restore it if removed. It should require customer agreement before registration.

16. Order ID

43. Order ID numbering

Can we set a specific starting range for Urban Steam Order IDs? Please confirm what range/format can be configured and whether it can be sequential for all orders.

17. Final Checkout Flow

44. Final checkout amount breakdown

At the final step show: Grand Total → Discount / Voucher → Amount payable from Urban Steam Wallet → Amount to Pay. The customer should clearly understand the order cost, wallet amount used and any additional payment required.

18. Overall Priority

CRITICAL – Must be fixed before V1.0

- OTP expiry/login issue
- OTP delivery reliability
- Google Maps and exact customer location
- Customer location → Captain location mapping
- Cart persistence
- Pickup slot/date logic
- Express delivery logic
- Incorrect notifications/account mapping
- Wallet Plan crediting
- Wallet balance disappearing
- Complete removal of Points System
- Wallet/account isolation
- Cancellation after delivery
- Payment/wallet calculation
- Terms & Conditions checkbox
- Correct final checkout amount

IMPORTANT – UI/UX

- New opening motion graphic
- Old logo appearing
- OTP timer
- Direct voucher application
- Cart total visibility
- Cart delete confirmation
- Catalogue image size
- Click/zoom garment images
- Garment Care Note
- Screen positioning
- Screen content visibility
- Wallet Plan card size
- View All Plans
- Order ID format

FLOW / PRODUCT DECISIONS TO CONFIRM

- Express same-day booking after 3 PM
- Express pickup slots
- Express shifts/cutoff times
- Standard vs Express date availability
- Google Maps “pin my location” flow
- Exact Order ID starting range
