

URBAN STEAM APP

VERSION 1.0 — CHANGE REPORT

Release: Version 1.0 — Initial Production Release

Report date: 21 September 2026

This document records every change made against the Urban Steam App Version 1.0 Final Scope of Work, in the same section order (1 to 19). For each section it states what was changed, where it was changed, how it can be checked, and what still remains. It also lists the backend/database changes, every file touched, the tests that were run and the open items.

All changes are in the local working copy. Nothing has been committed to git or deployed to production yet.

SUMMARY

Status	Sections	Count
Done	3, 4, 5, 6, 7, 8, 9, 10, 11, 14	10
Partly done	1, 2, 16, 17	4
Not started	12, 13, 15, 18, 19	5

Section 15 (subscription and wallet security) is marked CRITICAL in the scope and is still open. Section 14 is built and tested through the order API; a full on-screen and PDF test round is still to be run.

Item	Size
Existing files modified	31 (Admin Panel/Backend, Customer App, Captain App)
New source files	3 (two order-breakdown helpers and one expected-delivery helper)
Lines changed	about 1,250 added and 380 removed (this includes a package-lock refresh from npm install)
Database fields added	7 (five on Order, one on Order Charges, one on Pricing Item)

1. HOME PAGE — DELIVERY OPTIONS

Status: Partly done (core complete, two small leftovers)

Changes made

- The single "Book Order" button on Home was replaced by two options: **Standard Delivery** (24-hour turnaround) and **Express Delivery** (12-hour, small fee).
- Choosing an option saves the choice on the device, clears any old cart and opens the catalogue. The choice then carries through Catalogue, Cart and Checkout. Previously Express was only a switch on the last checkout screen.
- Terminology: the short label "Express" (with a lightning icon) was changed to "Express Delivery" in the Admin orders list and the Captain pickups list. The Admin order details page shows a pill reading "Express Delivery — 12 hr" or "Standard Delivery — 24 hr".
- **Backend fix found during checking:** the order-creation route was silently dropping the Express flag and fee, so they never reached the database. Both are now saved (verified with a real test order, since

deleted).

- When the admin turns Express OFF (Section 16), the Express button is hidden and Standard becomes a full-width button.

Where to see it

Customer App: Home screen. Admin Panel: Orders list and Order details.

Files

customer/src/pages/Home.tsx, customer/src/pages/ContinueBooking.tsx, admin panel/app/admin/orders/page.tsx, admin panel/app/admin/orders/[id]/page.tsx, admin panel/app/api/orders/route.ts, partner/src/app/pickups/page.tsx

Remaining

- Express button text should read "12-hour turnaround — for a small fee" (it currently reads "12-hour — small fee").
- "Standard Delivery" is not written on the Admin orders list, Captain screens or invoices. Standard is implied there.

2. STANDARD DELIVERY FLOW

Status: Partly done

Changes made

- The Standard flow (Home, Catalogue, Cart, Pickup Slot, Order Summary, Payment, Order Confirmation) already existed and was kept. It has a 24-hour turnaround, uses the existing pickup slots and carries no Express fee.
- An "Expected Delivery" line was added on the confirmation, tracking and Admin screens (see Section 5 for how it is calculated).

Remaining

Explicit "Standard Delivery" labelling on the Admin list, Captain screens and invoices (same gap as Section 1).

3. EXPRESS DELIVERY FLOW

Status: Done

Changes made

- Express uses the same catalogue and the same pickup-slot system as Standard. There is no separate Express slot page.
- The Express Delivery fee is set by the admin (Admin Panel, Add-On, Charges) and is not hard-coded. It is added automatically when Express is selected.
- The fee appears as its own line in the Order Summary before payment (Cart pickup-slot popup and the checkout summary), is included in the amount payable, is saved on the order record and is printed on the invoice.
- Minimum order handling: the minimum order value (admin-editable) is compared on garments only. Until it is reached, the Cart shows "Express Delivery: ₹49 — applies after minimum order is reached" and the Order Total shows garments only. Once reached, the Express fee and the full total are shown.

Worked example

Order Component	Amount
Garments	₹250
Express Delivery Fee	₹50
Total	₹300

Files

customer/src/pages/Home.tsx, Prices.tsx, Cart.tsx, ContinueBooking.tsx; admin panel/models/OrderCharges.ts; admin panel/app/admin/add-on/page.tsx

4. EXPRESS DELIVERY — SYSTEM-WIDE IDENTIFICATION

Status: Done (one small gap)

Changes made

Where	What now shows
Customer App	"Express Delivery" badge on Track Order and Order Confirmation. Notification text carries "— Express Delivery".
Captain App	"Express Delivery" badge on Pickups, Hub Drop, Delivery Pick, Delivery details, Delivery history and the delivery order page. Notifications add "(Express Delivery — 12hr)".
Admin Panel	Amber "Express Delivery" badge with a live countdown on the Orders list. Pill at the top of Order details.
Backend / order record	Express flag and fee saved on every order.
Invoice	Express Delivery Fee printed as its own line on both the customer and the admin invoice (Section 14).

Remaining

The Captain "Hub delivered" list does not yet show the Express badge.

5. EXPRESS DELIVERY — 12-HOUR SLA / TIMER

Status: Done

Changes made

- The delivery deadline is calculated by the **server**, from the pickup time: pickup time + 12 hours (Express) or + 24 hours (Standard). It is set the first time the order becomes "picked up".
- The server ignores any pickup time sent by a phone or browser, so a wrong device clock, time zone or VPN cannot move the deadline.
- Admin Panel: live countdown on Express orders in the Orders list and on Order details, turning red with "Overdue by ..." when late. Before pickup it reads "Timer starts at pickup".
- Captain App: countdown on Express orders on Delivery pick, Delivery details and Hub drop. Standard orders keep a plain "Deliver by" date and time.

- Customer App: "Expected Delivery" shows a clear estimate before pickup and the exact time after pickup.
- The Admin Express card text was corrected from "4–6 hours" to "12 hours".

Tests run

- A test order was sent with an expected delivery date of the year 2099 and another of 1999. The server ignored both and used its own clock (exactly 24 hours and 12 hours).
- A pickup update was sent with a false pickup time of 2000-01-01. The server ignored it and saved its own time, with the deadline exactly 12 hours later.

Files

admin panel/models/Order.ts, admin panel/app/api/orders/[id]/route.ts, customer/src/utis/expectedDelivery.ts (new), BookingConfirmation.tsx, OrderDetails.tsx, admin orders list and details pages, partner delivery/pick, delivery/details, hub/drop and pickups pages.

6. FINAL GARMENT CONFIRMATION

Status: Done

Changes made

- The pickup-slot popup in the Cart has the mandatory checkbox "I confirm I have added all my clothes for steam ironing."
- The supporting text sits directly under the Confirm Order button: "Our captain will only pick up the clothes added to your cart and confirmed in this order..."
- The Confirm Order button stays disabled until a slot is chosen and the box is ticked.
- The cart is emptied after an order is confirmed or cancelled, and when the app is closed and reopened after ordering.

Files

customer/src/pages/Cart.tsx

7. CART BUTTON — VISIBILITY AND NAVIGATION

Status: Done

Changes made

- The Cart circle in the bottom navigation is larger and the cart icon inside it is larger.
- "Your Cart" is written directly underneath the icon, in the brand purple.
- Because the bar is now taller, the purple floating total bar on the Categories page was raised so the navigation no longer covers it.

Files

customer/src/components/BottomNavigation.tsx, customer/src/pages/Prices.tsx

8. HOW TO ORDER

Status: Done

Changes made

- The How To Order popup on the Categories page now shows the four approved steps: 1 Choose Your Garments, 2 Review Your Cart, 3 Pick a Slot & Pay, 4 Relax, with the approved wording. The heading reads "How To Order".
- It opens automatically once per session and from the information icon in the header.
- The text is written in the app. It is not editable from the Admin Panel.

Files

customer/src/pages/Prices.tsx

9. GARMENT / LINE-ITEM DESCRIPTIONS**Status:** Done**Changes made**

Layer	Change
Database	Pricing Item has a new description field (up to 300 characters).
Backend	The pricing API accepts and saves the description when a garment is added or updated.
Admin Panel	New Description column on the Pricing page. The Add New Item popup has a Description box. Edit mode has an inline description field, saved with Update.
Customer App	Each garment image on the Categories page is tappable. It opens a smooth zoom popup with the large image, name, price and description. It closes with the X, a tap outside or the phone back button. Garments without an image or description still work.

Result

An admin edit appears in the Customer App without a new app build.

Not coveredThe older */booking* item list does not show descriptions.**Files**

admin panel/models/PricingItem.ts, admin panel/app/api/pricing/route.ts, admin panel/app/admin/pricing/page.tsx, customer/src/pages/Prices.tsx

10. CHECKOUT — GARMENT CARE / SERVICE ACKNOWLEDGEMENT**Status:** Done (interim legal links)**Changes made**

- A "Garment care note" card was added on the final checkout screen, directly above the Continue (payment) button.
- It states that Urban Steam provides steam ironing services and carries the approved disclaimer about minor wrinkles, folds or compression and variation by fabric, construction and condition.
- A mandatory checkbox reads "I have read and understood the above and agree to Urban Steam's Terms & Conditions." It starts unticked on every order. The Continue button stays disabled until it is ticked, so

wallet and Razorpay payments are both covered.

- Links to Terms & Conditions, Garment Care Policy and Damage/Loss Policy open an in-page popup, so the address, coupon and tick are not lost. The Terms link appears once, in the checkbox sentence.
- The Terms page text was made reusable, with anchors for section 5 (Garment Care) and section 6 (Damage or Lost Items).

Note

Separate Garment Care and Damage/Loss policy documents do not exist yet. Until the final legal wording is approved, those two links open the matching sections of the current Terms.

Files

customer/src/pages/ContinueBooking.tsx, customer/src/pages/TermsConditions.tsx

11. ORDER TRACKING

Status: Done

Changes made

- "Processing" and "Ironing" were removed from the customer Track Order page. It now has seven steps: Order Placed, Reached Location, Picked Up, Delivered to Hub, Process Completed, Out for Delivery, Delivered.
- Orders that the hub has set to Processing or Ironing show "Delivered to Hub" as the current step. "Ready" shows as Process Completed. The status pill reads "At hub" for those two statuses.
- The customer no longer receives "Order Processing Started" or "Ironing in Progress" notifications.
- The Admin Panel, Captain App and backend keep their statuses unchanged, because the hub team still uses them.

Files

customer/src/pages/OrderDetails.tsx, customer/src/services/notificationService.ts,
customer/src/hooks/useOrderStatusMonitor.ts

12. ADDRESS / PROFILE BUG FIX

Status: Not started (cause found, fix not applied)

Findings

- The address form has one City box, but City is asked twice in practice. The form order is City, State, Pincode. Choosing a State clears City and Pincode (AddAddress.tsx, handleStateChange), and typing a Pincode auto-fills and overwrites City.
- The Captain App and Admin Panel address screens were checked. They have a single City input and no such issue.

Planned fix

Stop the State dropdown from clearing City and Pincode. Optionally move Pincode above City and State. Then test add and edit address and confirm the address shows correctly in Profile, Cart, Checkout and the order.

13. INSTANT NOTIFICATIONS

Status: Not started (analysed, plan proposed)

Findings

- Alerts are created inside the apps by checking the server on a timer (customer every 2 seconds, captain every 30 seconds), so they only appear while the app is open. There is no push service.
- The Captain "Ready for Delivery" alert looks for a status that does not exist (ready_for_delivery), so it never fires. The Captain "already notified" list is kept in memory and resets on restart.
- On a fresh login the Customer App creates alerts for every old order. Admin receives no event alerts.

Changes already made that touch notifications

- Express Delivery is added to customer and captain notification text (Section 4).
- The Processing and Ironing alerts were removed for customers (Section 11).

Plan

Phase 1: the server writes one notification record per event and each app reads its own feed within about 2 seconds, with an Admin bell. Phase 2: Firebase push for closed-app phones. This needs the client's Firebase project and service-account key.

14. INVOICE / PAYMENT CONSISTENCY

Status: Done (full test round still to run)

Problem found

- The customer invoice worked out the discount as (items + due) – total, which is wrong when Express and a voucher are used together.
- The admin invoice had no Express line at all.
- The order record did not store the discount, wallet amount or amount paid online, so every screen had to guess.
- The admin invoice logos were drawn in a fixed 30 × 20 mm box and appeared stretched.

Changes made

Step	Change
Saved on each order	Order now stores itemsSubtotal , discountAmount , walletUsed and amountPaidOnline . The order route computes the subtotal itself, checks the discount against the charged total (deriving it from the total if they disagree) and records only the wallet amount that was really deducted. totalAmount keeps its meaning.
Checkout	Sends the discount with the order and passes previous due and amount paid online to the confirmation screen.
Customer invoice	Prints Subtotal, Tax, Express Delivery Fee, Previous Due, Discount, one Total, then Paid from wallet and Paid online (only when above zero). "Grand Total" duplicate removed.
Admin invoice	Same layout, and it now has the Express Delivery Fee line. Logos keep their real proportions.

Step	Change
Screens	Admin Order details shows the full breakdown under Items in Order. Customer Track Order has a new Payment Summary card. Booking Confirmation shows the breakdown and "Order Total" replaces "Price".
Older orders	They have no saved breakdown, so a corrected formula is used (items + due + Express – total). The wallet line is hidden for them.

Worked example

Line	Amount
Subtotal	₹250
Express Delivery Fee	+₹50
Previous Due	+₹20
Discount	-₹25
Total	₹295
Paid from wallet	₹100
Paid online	₹195

Files

admin panel/models/Order.ts, admin panel/app/api/orders/route.ts, admin panel/lib/orderBreakdown.ts (new), admin panel/app/admin/orders/[id]/page.tsx, customer/src/utls/orderBreakdown.ts (new), customer/src/utls/generateInvoice.ts, customer/src/pages/ContinueBooking.tsx, BookingConfirmation.tsx, OrderDetails.tsx

Still open

- The Captain screens do not show the Express fee line.
- The Razorpay amount is still calculated by the app. Server-side pricing is an optional stronger step.
- A real on-screen and PDF test round is still to be run.

15. SUBSCRIPTION AND WALLET — CRITICAL SECURITY REQUIREMENT

Status: Not started (CRITICAL)

Findings

- Logout in the Customer App only navigates to the start page (Profile.tsx). It does not clear stored data. This was re-checked on 21 September 2026: nothing in the Customer or Captain App clears local storage.
- Cached wallet balance, profile and login data therefore survive logout, and the next login on the same device can inherit them.

Planned fix

Clear stored data on logout in both apps, then test subscription purchase, credit, debit, redemption and expiry across several independent accounts on the same device and on different devices.

16. ADMIN PANEL — CENTRAL CONTROL AND VISIBILITY

Status: Partly done

Visibility — done

- Delivery type (Standard or Express) pill on Order details and the Express badge on the Orders list.
- Express Delivery fee, items subtotal, previous due, discount, wallet and online payment lines on Order details.
- Express 12-hour timer on the list and on the details page.
- The Orders list now refreshes by itself every 10 seconds and when the browser tab is opened again, so new orders and status changes appear without a reload. Filters, search and selections are kept.
- Already present: customer details, order number, garments, quantities, order value, payment status, pickup slot, assigned captain, statuses and timestamps.

Control — done

Setting	How it works
Express Delivery ON/OFF (new)	Green ON / red OFF button in Add-On, Charges, on the Express card. It saves immediately. When OFF: Home hides the Express button, Prices, Cart and Checkout switch back to Standard, and Checkout re-checks the setting just before payment. The server still accepts an Express order that was already paid, to avoid a customer being charged with no order.
Express fee, label, info text	Add-On, Charges. A fee of ₹0 no longer means "off". The card warns that Express is ON at no charge.
Garment images	Pricing page (item and category images).
Garment descriptions	Pricing page (Section 9).
Other settings	Pincodes, hubs, pickup time slots, Today/Tomorrow booking ON/OFF, minimum order value, cancellation and failed-delivery fees, cancellation policy text, vouchers, wallet and points values, home banners, categories and subscriptions.

Remaining

- Admin event alerts (new order, cancelled, delivery failed) do not exist yet (Section 13).
- Garment image uploads are saved into the server's public/uploads folder. On a live server this may not be served or kept, so cloud storage may be needed once hosting is confirmed.
- Not editable by the admin today: the 12 and 24 hour turnaround values, Home button texts, the garment care note, Terms text, How To Order steps, and invoice details such as the GST number and support email.
- The Admin "Settings" page is not connected to anything and should not be relied on.

17. CUSTOMER APP / CAPTAIN APP / ADMIN / BACKEND CONNECTIVITY

Status: Partly done

Checked

All three apps read and write one shared backend and database (production address <https://acsgroup.cloud>). A cross-check of every item in the scope was carried out on 21 September 2026.

Fixed

- The Admin orders list refreshes automatically.
- The Express fee and the full price breakdown are visible in Admin.
- The Express flag and fee reach the database.

Open

- The Captain cannot see payment status or the fee breakdown.
- Some timestamps (reached location, delivered to hub, out for delivery, delivered) come from the captain's phone or the admin's browser clock, not the server.
- The minimum order value and Today/Tomorrow booking switches are enforced only inside the app.
- Customer points are awarded twice per order: once when the order is created and again when it is delivered. Points can be redeemed for wallet money. This is not in the scope document and needs a decision.

18. HOME PAGE / BRANDING QUALITY

Status: Not started (one item done)

Done

The lightning icon was removed from the Express row on the Order Confirmation screen.

Remaining

- "Ironing" capitalisation on the launch page (Welcome screen).
- "LaundryMate" still appears in the customer page title and description tags (index.html).
- Lightning icons remain on Home and twice on the checkout Express card.
- Font check against the approved brand guideline (Montserrat and Manrope are currently loaded).

19. VERSION 1.0 QUALITY / PRODUCTION READINESS

Status: Not started

Tests run so far

Test	Result
Express flag and fee saved on a real order	Passed (test order deleted)
Deadline cannot be changed from a device (dates 2099, 1999 and a false pickup time)	Passed
Admin can change the minimum order and Express fee and the customer app follows	Passed (restored to ₹500 and ₹49)
Garment description saved and returned by the API	Passed (value cleared afterwards)
Express ON/OFF saved and read back; fee unchanged	Passed (left ON)
Price breakdown: Express with voucher, due and wallet; Standard; Express only; wallet covers everything; tampered discount; older order fallback	All correct (temporary customer and orders deleted)

Test	Result
Type checks on changed Customer and Admin files	No errors
Logo placement before and after on the admin invoice (browser preview)	Fixed

Still to do

- Run every section on screen in the Customer App, Captain App and Admin Panel, including both downloaded PDFs.
- Multi-account wallet and subscription test (Section 15).
- Notification test on real phones with the app closed (Section 13).
- Confirm hosting, image storage and the production settings, then approve and deploy.

ADDITIONAL CHANGES (NOT TIED TO ONE SECTION)

- **Minimum order:** the value set by the admin is now respected even when set to 0 (the apps previously fell back to ₹500). The Prices page shows a small grey note of the minimum. The Cart compares garments only and shows a single red note "Minimum order value of ₹500 required" with a disabled grey button until the minimum is reached.
- **Live total:** the Categories page shows a floating bar with the item count and running garment total that opens the Cart.
- **Checkout:** a "Change location" button was added on the final checkout screen.
- **Admin Orders list:** the status pill was fixed so its text fits, and Express countdowns update every 30 seconds.
- **Local set-up (not code):** a local database, dummy garments and test users were added so all three apps run together on one computer. The admin package-lock file was refreshed by npm install.
- **Tracking files:** V1.0_CHANGE_TRACKER.md is the working checklist. This report is the formal record.

BACKEND AND DATABASE CHANGES

Area	Change
Order (model)	New: expectedDeliveryAt, itemsSubtotal, discountAmount, walletUsed, amountPaidOnline. The Express flag and fee are now actually saved by the create-order route.
Order Charges (model)	New: expressDeliveryEnabled (default ON).
Pricing Item (model)	New: description (up to 300 characters).
POST /api/orders	Saves Express flag and fee; computes items subtotal; checks discount and wallet; saves amount paid online; logs a warning if the totals do not agree.
PATCH /api/orders/[id]	When an order first becomes "picked up": server sets the pickup time and the 12 or 24 hour delivery deadline and ignores any value sent by the app.
/api/pricing (POST, PUT)	Accept and save description.
/api/order-charges	Now stores expressDeliveryEnabled (no code change needed in the route).

After any change to a database model, the admin server must be restarted before the new field is saved.

COMPLETE LIST OF FILES CHANGED

App	File	Change
Admin	app/admin/add-on/page.tsx	Express ON/OFF button; Express card text corrected to 12 hours; status messages; minimum order and fee inputs
Admin	app/admin/orders/page.tsx	Express badge and countdown; status pill fix; 10-second auto refresh
Admin	app/admin/orders/[id]/page.tsx	Delivery type pill; price breakdown; invoice rewritten from saved numbers; invoice logo proportions; countdown box
Admin	app/admin/pricing/page.tsx	Description column, add and edit
Admin	app/api/orders/route.ts	Saves Express fields and price breakdown; total check
Admin	app/api/orders/[id]/route.ts	Server-set pickup time and delivery deadline
Admin	app/api/pricing/route.ts	Description in POST and PUT
Admin	models/Order.ts	New fields (deadline and price breakdown)
Admin	models/OrderCharges.ts	expressDeliveryEnabled
Admin	models/PricingItem.ts	description
Admin	lib/orderBreakdown.ts (new)	Shared breakdown calculation
Admin	package-lock.json	Refreshed by npm install
Customer	src/components/BottomNavigation.tsx	Larger Cart button and "Your Cart" label
Customer	src/hooks/useOrderStatusMonitor.ts	Express tag; Processing and Ironing alerts removed
Customer	src/pages/Booking.tsx	Minimum order value respects 0
Customer	src/pages/BookingConfirmation.tsx	Order Total breakdown; expected delivery; Express row without icon
Customer	src/pages/Cart.tsx	Garment confirmation; Express fee handling; minimum order wording; Express ON/OFF
Customer	src/pages/ContinueBooking.tsx	Garment care card and popups; Express fee and ON/OFF re-check; discount sent; Change location
Customer	src/pages/Home.tsx	Standard and Express buttons; Express ON/OFF
Customer	src/pages/OrderDetails.tsx	Seven-step tracking; Express badge; Payment Summary; expected delivery
Customer	src/pages/Prices.tsx	How To Order; description popup; floating total bar; minimum note; Express ON/OFF
Customer	src/pages/TermsConditions.tsx	Reusable terms text with anchors
Customer	src/services/notificationService.ts	Express tag; Processing and Ironing alerts removed
Customer	src/utls/generateInvoice.ts	Invoice summary from saved numbers; Express line
Customer	src/utls/expectedDelivery.ts (new)	Expected delivery text
Customer	src/utls/orderBreakdown.ts (new)	Shared breakdown calculation
Captain	src/app/delivery/[id]/page.tsx	Express badge
Captain	src/app/delivery/details/page.tsx	Express badge and countdown
Captain	src/app/delivery/history/page.tsx	Express badge
Captain	src/app/delivery/pick/page.tsx	Express badge and countdown
Captain	src/app/hub/drop/page.tsx	Express badge and countdown
Captain	src/app/pickups/page.tsx	"Express Delivery" badge; SLA note

App	File	Change
Captain	src/hooks/usePartnerOrderMonitor.ts	Express tag in notifications
Captain	src/services/orderMonitor.ts	Express tag in notifications

OPEN DECISIONS AND ITEMS FOR THE CLIENT

- **Points awarded twice per order.** Decide whether to award points only on delivery (recommended) or leave as is. Not part of the scope document.
- **Hosting for garment images.** Confirm where the backend will run so image uploads can be stored safely.
- **Firebase.** Provide the project and service-account key for push notifications, and confirm whether iOS is in Version 1.0.
- **Legal documents.** Provide the final Garment Care Policy and Damage/Loss Policy wording.
- **Minimum order rule.** Currently garments only. The alternative is to count the Express fee towards the minimum.
- **Server-side pricing.** Optional stronger step so the server, not the app, calculates the amount charged.

VERSION 1.0 MASTER REQUIREMENT REGISTER — STATUS

ID	Requirement	Priority	Status
V1-001	Home Page — Standard & Express Delivery options	High	Partly done
V1-002	Standard Delivery booking flow	High	Partly done
V1-003	Express Delivery booking flow	High	Done
V1-004	Express Delivery dynamic fee	High	Done
V1-005	Express Delivery system-wide identification	High	Done
V1-006	Express 12-hour SLA / timer	High	Done
V1-007	Final garment confirmation before payment	High	Done
V1-008	Cart button size + "Your Cart" label	Medium	Done
V1-009	How To Order	Medium	Done
V1-010	Dynamic garment descriptions	Medium	Done

V1-012	Track Order status cleanup	Medium	Done
V1-013	Duplicate City field bug fix	Medium	Not started
V1-014	Instant notification fix	High	Not started
V1-015	Express fee / invoice consistency	High	Done
V1-016	Subscription & wallet security	CRITICAL	Not started
V1-017	Admin Panel — central visibility/control	CRITICAL	Partly done
V1-018	Customer/Captain/Admin/Backend synchronisation	CRITICAL	Partly done

ID	Requirement	Priority	Status
V1-019	Branding/font/visual cleanup	Medium	Not started
V1-020	Final production QA and launch readiness	CRITICAL	Not started

VERSION 1.0 RELEASE POSITION

Version 1.0 will be complete when the agreed scope has been implemented, tested, verified across the Customer App, Captain App, Admin Panel and backend, and approved by Urban Steam for production deployment. As of 21 September 2026, 11 of the 20 register items are built, 4 are partly built and 5 are not started. The critical item still open is V1-016 (subscription and wallet security). Version 1.0 should not be treated as production-ready until that item, notifications and the final QA round are complete.
