

URBAN STEAM APP

VERSION 1.0 — FINAL SCOPE OF WORK

Release: Version 1.0 — Initial Production Release

This document defines the agreed functional changes, fixes, improvements and critical technical requirements for the Urban Steam App Version 1.0.

Version 1.0 is the production release to be completed, tested, approved and launched before the next major rebuild.

1. HOME PAGE — DELIVERY OPTIONS

The Home screen should clearly present two booking options:

1. Standard Delivery

24-hour turnaround

2. Express Delivery

12-hour turnaround — for a small fee

The terminology **Standard Delivery** and **Express Delivery** should be used consistently throughout the Customer App, Captain App, Admin Panel, backend, order records and invoices.

2. STANDARD DELIVERY FLOW

When the customer selects **Standard Delivery**, the standard booking process should be followed.

Customer Flow

Home → Standard Delivery → Catalogue → Cart → Pickup Slot → Order Summary → Payment → Order Confirmation

- Has a 24-hour turnaround.
- Uses the existing pickup-slot system.
- Does not carry an additional Express Delivery fee.
- Must be correctly identified as a Standard Delivery order throughout the system.

3. EXPRESS DELIVERY FLOW

When the customer selects **Express Delivery**, the customer follows essentially the same booking process as Standard Delivery.

Customer Flow

Home → Express Delivery → Catalogue → Cart → Pickup Slot → Order Summary → Express Fee → Payment → Order Confirmation

Requirements

- Express Delivery uses the **same catalogue** as Standard Delivery.
- Express Delivery uses the **same pickup-slot system** as Standard Delivery.
- There is no separate Express pickup-slot page in Version 1.0.
- Customer selects garments normally.
- Customer selects an available pickup slot normally.
- Express Delivery automatically adds the applicable Express Delivery fee to the order.

Express Delivery Fee

- Be configurable from the Admin Panel.
- Be dynamic and not hard-coded into the app.
- Automatically apply when Express Delivery is selected.
- Appear separately in the Order Summary before payment.
- Be included in the total amount payable.
- Be included in the order record.
- Be included in the final invoice.

Order Component	Amount
Garments	■250
Express Delivery Fee	■50
Total	■300

4. EXPRESS DELIVERY — SYSTEM-WIDE IDENTIFICATION

Once an order is placed as Express Delivery, the Express status must be carried throughout the complete system.

Express Delivery status must be reflected wherever relevant in:

- Customer App
- Captain App
- Admin Panel
- Backend/order record
- Order details
- Invoice
- Notifications

Admin Panel

Express Delivery orders must have a **clear and prominent visual indicator** so the Admin can immediately identify them.

Captain App

The Captain App must clearly identify Express Delivery orders so the captain knows that the order has a 12-hour turnaround requirement.

Customer App

The customer should clearly be able to see that the order has been placed as **Express Delivery**.

5. EXPRESS DELIVERY — 12-HOUR SLA / TIMER

Express Delivery is defined as:

12-hour turnaround from pickup time.

- Express orders should have an appropriate countdown/timer in the Admin Panel.
- Express orders should have an appropriate countdown/timer in the Captain App where operationally required.
- The timer should be based on the applicable pickup timestamp and 12-hour turnaround requirement.
- Final timer behaviour and exact display should be confirmed during development.

6. FINAL GARMENT CONFIRMATION

Before payment/order confirmation, the customer must confirm that all garments intended for steam ironing have been added to the cart.

Mandatory Checkbox

"I confirm I have added all my clothes for steam ironing."

The customer must actively select the checkbox before proceeding.

Supporting Text

Add a short explanation below the checkbox along the lines of:

"Our captain will only pick up the clothes added to your cart and confirmed in this order. This helps us maintain transparency and ensures your order is processed correctly."

Final wording can be refined for UI.

Operational Behaviour

- The digital order is the reference for the garments being collected.
- Garments not included in the confirmed order should not be handed over as part of that order.
- The confirmation is intended to maintain transparency between the customer, captain and Urban Steam.

7. CART BUTTON — VISIBILITY & NAVIGATION

- Increase the size of the **Cart button/icon** so it is more prominent and easier to notice.
- Add the text **"Your Cart"** directly underneath the Cart icon.
- Make the Cart easier for customers to identify and navigate to, particularly for first-time users.

8. HOW TO ORDER

Add/update the customer-facing **How To Order** section.

Final Content

How To Order

1. Choose Your Garments

Count your garments and tap "+" to add them.

2. Review Your Cart

Tap Cart below and check your order.

3. Pick a Slot & Pay

Choose your pickup slot and complete payment.

4. Relax

We'll take care of the rest.

9. GARMENT / LINE-ITEM DESCRIPTIONS

Each garment/line item in the catalogue should support a **dynamic description**.

Each garment should support:

- Garment name
- Garment image
- Garment description
- Price

Admin Control

The garment description must be editable from the Admin Panel, similar to the existing ability to change garment images.

- Add a description.
- Edit a description.
- Update a description.

Changes should reflect dynamically in the Customer App without requiring a new app build.

10. CHECKOUT — GARMENT CARE / SERVICE ACKNOWLEDGEMENT

Add a customer acknowledgement during checkout before payment.

The purpose is to communicate the nature of steam ironing and reasonable limitations associated with garment handling and transportation.

Disclaimer

The checkout acknowledgement should communicate:

“Steam ironing and transportation may result in very minor wrinkles, folds or compression during handling and transit. Results may also vary depending on the fabric, construction and existing condition of each garment.”

It should also make clear that Urban Steam provides steam ironing services and that garment results can vary depending on the characteristics and condition of individual garments.

Customer Acknowledgement

Add a mandatory checkbox such as:

“I have read and understood the above and agree to Urban Steam's Terms & Conditions.”

Customer must actively acknowledge this before proceeding with payment.

Legal Documentation

The checkout disclaimer should link to the applicable:

- Terms & Conditions
- Garment Care Policy
- Damage/Loss Policy, where applicable

Final legal wording will be separately reviewed and approved.

11. ORDER TRACKING

Simplify the Track Order page.

Remove:

- Ironing
- Processing

These statuses should no longer appear on the customer-facing Track Order page.

The remaining order-status journey should reflect the actual Urban Steam operational process.

Final status sequence should be confirmed during testing.

12. ADDRESS / PROFILE BUG FIX

Current Issue: While updating an address in the Profile section, the application currently asks the customer to enter the City twice.

Requirement

- Remove the duplicate City field/input.
- Customer should only need to enter/select the City once.
- Test the complete address update flow after the fix.
- Verify that the duplicate City field does not appear elsewhere in the address workflow.

13. INSTANT NOTIFICATIONS

Current Issue: Instant notifications are currently not being received reliably.

Requirement

Investigate and fix the notification system.

- Notifications are triggered at the correct events.
- Customer notifications work correctly.
- Captain notifications work correctly.
- Admin notifications work correctly where applicable.
- Notifications are delivered reliably.
- Notification behaviour works correctly in production.

The complete notification event list should be reviewed and tested before Version 1.0 launch.

14. INVOICE / PAYMENT CONSISTENCY

All amounts displayed to the customer, charged through the payment system and reflected in the invoice must remain consistent.

Specifically for Express Delivery:

Garment/Order Value + Express Delivery Fee = Final Amount

The final amount must be consistent across:

- Order Summary
- Payment
- Order record
- Customer App
- Admin Panel
- Captain App where applicable
- Downloaded Invoice

Existing Bug

The Express fee is currently **not reflected in the downloaded final invoice**. This must be fixed.

The downloaded invoice must:

- Show the Express Delivery fee separately.
- Include it in the final total.
- Match the amount actually charged to the customer.

15. SUBSCRIPTION & WALLET — CRITICAL SECURITY REQUIREMENT

During testing, an issue was identified where a subscription purchased by one customer appeared to result in money/value being credited to other customers' wallets.

This is a **critical financial and data-integrity issue** and must be resolved before Version 1.0 production launch.

Requirements

- A subscription purchased by Customer A must affect **only Customer A's account/wallet**.
- Wallet balances must be strictly associated with the correct customer account.
- No customer's wallet balance, subscription value, credits or benefits may be credited to another customer's account.
- Subscription transactions must be mapped to the correct unique customer/user ID.
- Wallet credits and debits must maintain a reliable transaction history.
- Backend/database logic must be reviewed for incorrect user/account mapping.
- Customer data must remain completely isolated between accounts.
- Subscription and wallet logic must be tested across multiple independent customer accounts.
- Purchase, credit, debit, redemption and expiry scenarios must be tested.
- The issue must be completely resolved and verified before production launch.

Priority: CRITICAL — Must be resolved and successfully tested before Version 1.0 production launch.

16. ADMIN PANEL — CENTRAL CONTROL & VISIBILITY

The Admin Panel should function as the central operational control centre for Urban Steam.

Core principle:

Admin should have complete visibility of the operational state of every order.

Where a feature exists in the Customer App or Captain App, corresponding information should be available in the Admin Panel wherever operationally relevant.

Admin should be able to see, where applicable:

- Customer details
- Order number
- Delivery type — Standard / Express
- Garments
- Quantities
- Garment descriptions
- Order value
- Express Delivery fee
- Payment status
- Pickup slot
- Assigned captain
- Pickup status
- Delivery status
- Relevant timestamps
- Express 12-hour SLA/timer
- Invoice/order amount
- Relevant notifications/events

Admin should be able to control configurable elements where applicable, including:

- Express Delivery ON/OFF
- Express Delivery fee
- Garment images
- Garment descriptions
- Relevant operational settings

The objective is to ensure routine operational changes can be made by Urban Steam through the Admin Panel without requiring a developer/app update.

17. CUSTOMER APP / CAPTAIN APP / ADMIN / BACKEND CONNECTIVITY

All applicable Version 1.0 functionality must maintain proper connectivity between:

Customer App ↔ Backend ↔ Captain App ↔ Admin Panel

For every relevant order, the following information must remain synchronised:

- Order details
- Garment information
- Quantities
- Delivery type
- Express status
- Payment status
- Order status
- Pickup information
- Delivery information
- Relevant timestamps
- Order value
- Applicable fees

Development Principle

No feature should be implemented in only one application where that feature requires corresponding functionality or data visibility in another part of the system.

Every V1.0 feature should be assessed across:

Customer App → Captain App → Admin Panel → Backend/Database

where applicable.

18. HOME PAGE / BRANDING QUALITY

Launch Page

- Correct the capitalisation of “**Ironing**” where currently displayed incorrectly.
- Review the application font and update it to align with the approved Urban Steam brand guidelines.

Express Visuals

- Reduce the excessive use of flash/lightning icons around Express Delivery.
- Keep Express Delivery visually distinctive without making the interface cluttered.
- Maintain consistency with the Urban Steam visual identity.

19. VERSION 1.0 QUALITY / PRODUCTION READINESS

Before Version 1.0 is approved for production, all requirements above should be:

Developed → Tested → Bug-fixed → Retested → Approved → Deployed

Particular attention must be given to:

- Payment accuracy
- Invoice accuracy
- Subscription/wallet security
- Customer data isolation
- Order synchronisation
- Express Delivery identification
- 12-hour Express SLA
- Notifications
- Address functionality
- Catalogue/garment information
- Checkout acknowledgements
- Customer order tracking
- Admin visibility
- Captain App visibility

Version 1.0 should not be considered production-ready until the critical financial/data issues have been resolved and verified.

VERSION 1.0 MASTER REQUIREMENT REGISTER

ID	Requirement	Priority
V1-001	Home Page — Standard & Express Delivery options	High
V1-002	Standard Delivery booking flow	High
V1-003	Express Delivery booking flow	High
V1-004	Express Delivery dynamic fee	High
V1-005	Express Delivery system-wide identification	High
V1-006	Express 12-hour SLA / timer	High
V1-007	Final garment confirmation before payment	High
V1-008	Cart button size + “Your Cart” label	Medium
V1-009	How To Order	Medium
V1-010	Dynamic garment descriptions	Medium
V1-011	Checkout garment-care acknowledgement	High
V1-012	Track Order status cleanup	Medium
V1-013	Duplicate City field bug fix	Medium
V1-014	Instant notification fix	High
V1-015	Express fee / invoice consistency	High

ID	Requirement	Priority
V1-016	Subscription & wallet security	CRITICAL
V1-017	Admin Panel — central visibility/control	CRITICAL
V1-018	Customer/Captain/Admin/Backend synchronisation	CRITICAL
V1-019	Branding/font/visual cleanup	Medium
V1-020	Final production QA and launch readiness	CRITICAL

VERSION 1.0 RELEASE DEFINITION

Urban Steam App Version 1.0 will be considered complete when the agreed scope above has been implemented, tested, verified across the Customer App, Captain App, Admin Panel and backend, and approved by Urban Steam for production deployment.

Version 1.0 = Initial Production Release.

Any substantial functionality introduced after this release should be evaluated separately as a future version/rebuild.
