Urban Steam – Additional App Review Points

Additional requirements and observations | October 2026

1. Standard & Express Delivery

Remove the Express toggle from Standard orders

When a customer selects Standard Delivery at the beginning of the booking process, the final-step page currently shows an Express toggle. Turning it on adds the Express fee, but the pickup slot remains one selected for Standard Delivery. Please remove the Express toggle when Standard Delivery has already been selected. Standard and Express have separate pickup slots, so customers should select the delivery type first and then choose from the corresponding slots.

Add a note to the time-slot screen

Please display the following message on the pickup time-slot screen:

> **“More pickup slots are added regularly. Please check back if your preferred slot is unavailable.”**

2. Special Pickup Instructions

Rename “Additional Notes”

Change the field label from “Additional Notes” to “Special Pickup Instructions”.

> **Suggested customer-facing text**
> If you won’t be available at the time of pickup, please mention your preferred collection location in the comments below (e.g., lobby, reception, or doorstep).

3. Discount Calculation

Fix discount calculation

Discounts are not being calculated correctly. Please check the discount calculation logic and ensure the final bill reflects the correct discount and payable amount at checkout.

4. Booking Confirmation, Back Navigation & Duplicate Orders

Back button after booking confirmation

Once a booking is confirmed, pressing the back button takes the customer back to the same cart and payment page. After confirmation, customers should not be taken back to the previous cart or payment screen. The confirmation screen should offer only “Home” and “Track Order”. Ideally, the device back button should take the customer to the Home Screen.

Prevent duplicate bookings and payments

The same cart/order is getting booked again if the customer returns to the payment page and attempts to pay again. Once an order is successfully confirmed, it must not be possible to create another booking for the same order through the old cart or payment screen. Please ensure confirmed orders and successful payments are handled correctly to prevent duplicate orders or charges.

5. Referrals & Wallet Rewards

Fix the “Invite a Friend to Urban Steam” button

The button is currently not working. Please fix the referral/invitation functionality.

Credit referral rewards to the wallet, not points

Please confirm whether the current referral functionality still uses the Points System. As discussed, the Points System should be removed completely. When a new customer installs Urban Steam using a referral code, credit ■30 directly to their Urban Steam Wallet instead of awarding points. Ensure the reward is credited to the correct customer account and does not create or use a points balance.

6. Correct Payment Method on Booking Confirmation

Display the actual payment method

The Booking Confirmed page displays “UPI” even when the entire order has been paid using the Urban Steam Wallet.

The displayed payment method must reflect the actual transaction. If the full amount is paid through the wallet, show “Urban Steam Wallet”. If payment is split between the wallet and UPI, show both methods and the amount paid through each.

7. Customer Data Security

Explain the current data security setup
Please confirm how Urban Steam customer data is secured and what services, tools or security measures are currently being used to protect it from unauthorised access, hacking or theft. Please include safeguards for customer information, login credentials, order details, addresses, wallet balances and transaction records.

8. Service Area Screen – Content Update

Replace the current service-area message
Please update the content shown when a customer is within Urban Steam’s service area to the following:

> **Congrats!**
>
> **You’re in our service area.**
>
> Exceptional garment care, delivered to your doorstep. Your Urban Steam experience starts here.

9. Captain App – Simpler Pickup Schedule

Show customers grouped by pickup time slot
Please review how the Captain App can be made easier to use. Discuss the best approach with Yash. Ideally, the Captain should be able to see all customers booked within each pickup time window, grouped clearly by slot.

Example layout
9:00 AM – 11:00 AM
• Veena Vishwanath
• Arpita
• Ramaswamy
• Ramakrishnan

11:00 AM – 1:00 PM
• Customer A
• Customer B
• Customer C
• Customer D

Expected benefit
The Captain should be able to quickly see which customers need pickup during each time window, open a customer’s details, and navigate to the correct location without searching through a long, ungrouped order list.

Priority notes

Please prioritise preventing duplicate bookings/payments, correcting discounts and payment-method display, and ensuring referral rewards are credited to the correct wallet. The Captain App schedule and customer data security review should also be discussed and confirmed.
